**Tracking Student Completion of Anonymous Questionnaire Submissions**by [Ricky Schumaker](#) - Monday, 20 June 2005, 09:40 PM

First I want to say that the questionnaire module has definitely solved one of my important problems that I was having in my site admin.

My question involves the tracking of students' completion of an anonymous questionnaire. Right now we have the questionnaire set up as an "evaluation" of the course and online training in general. We would like to keep the actual submission and responses anonymous, but we would like to see who has completed the questionnaire.

I have been searching through the posts and have seen some back-end or at least database-level ways to possibly view this, but I was wondering if there was a way to have a check box or other indication of completion on the front-end.

We would like to track to make sure everyone has submitted the "evaluation" so that we can evaluate the accuracy of the data. Any help you could pass along would be great.

Thanks again,

Ricky

Does anyone have any ideas? It is one of my big issues in moving forward. Any ideas or pointers you could give me would be greatly appreciated.

Thank you.

Hi Ricky!

Suggest you IM [Mike Churchward](#). He ported the Questionnaire to [Moodle](#).

Hi Ricky -

This is one of the feature already slated to be developed. Right now, 'anonymous' isn't completely anonymous. The 'questionnaire_attempts' table tracks all user attempts and stores the response id of the 'questionnaire_response' table always.

'Anonymous', prevents the userid from being entered in the 'questionnaire_response' field, and prevents the user information from being displayed with the results. But, you can always associate the entry in the 'attempts' table with the 'response' table and figure it out.

The feature request will provide the ability to do both. Have the respondents hidden from the teachers, or have it completely anonymous - no associations at all.

Mike,

Thank you very much for replying to my message and to my post.

Your post was helpful in pointing out to me what tables I needed to look at. I am in the process now of coding a php script to display the information that I need. I found out that what we are looking for is the the students who HAVE NOT completed the survey for a given course.

I think that I have gotten the SQL query pretty much worked out, but I would like to insert some dynamic forms for the query. The main thing that I want is to be able to have a dropdown list (exactly like the first dropdown on the "Log" selection page for a course) which queries the database and then displays all the courses as options in the dropdown. I then want to be able to have the selected course name converted over to the numerical course "id" so I can change the SQL query. This is so that different courses can be viewed from the same page and it can be refreshed.

THE SQL QUERY THAT I HAVE SO FAR THAT SEEMS TO BE DOING THE TRICK IS:

```
SELECT DISTINCT mdl_user.FIRSTNAME, mdl_user.LASTNAME,  
mdl_user.username
```

```
FROM mdl_user, mdl_questionnaire_response, mdl_user_students
```

```
WHERE
```

```
mdl_user_students.userid = mdl_user.ID
```

```
AND mdl_user_students.course = '2'
```

```
AND (mdl_user_students.userid mdl_questionnaire_response.username  
OR mdl_questionnaire_response.complete = 'N');
```

I have never coded a dropdown, so any help you could give me would be great. I will continue playing with it to see if I can get it right. If I get anything I think would be useful or productive as a final product I will be sure to pass it along.

Thanks again for all of your help.

Ricky

Re: Tracking Student Completion of Anonymous Questionnaire Submissions

by [Ricky Schumaker](#) - Thursday, 30 June 2005, 10:51 PM

Ok...I think that this SQL query isn't quite what I need.

What I want it to view is:

1. Students who are enrolled in the selected course.
2. Of these students, who has either not submitted a response or who has not completed the survey.

Right now I'm having a little trouble with it reading students who are enrolled. It is giving me the students who have not completed the survey (with a 'N' in the "completed" column of the "mdl_questionnaire_response" table.

If anybody can see anything that I could do to improve the query I would really appreciate it.

Mike,

I have just come back to the forums after a little bit of a vacation. This same issue came up and I was just revisiting it. I was just wondering if you had worked with this issue because you said that you had it slated to be improved.

If this isn't I was just wondering if there are some other solutions. All I want to do is to see which participants in a course have submitted a survey (which is anonymous submission). I never really got the method of checking the databases against each other honed perfectly.

Any help or suggestions about the new version of the module would be helpful.

Thanks again for your help and it looks like you are doing some great updates and work with the module.

Ricky
